What is a Supplier?

Wise2Sync allows you to import products not only from your eCommerce store but also directly from other companies. We call those companies Suppliers - usually they provide a dropship service (contact them directly to make sure) and you can import their product information to your store or marketplace account.

Each supplier has some kind of data feed where all the information about products is provided. We import this data into Wise2Sync. Follow this link to see a full list of connected suppliers.

Revision #2
