

# Setting up product export from Magento 2 to Wise2Sync

In this article, we will explain how you can configure your Wise2Sync connector to export products to Wise2Sync.

## Connector configuration

Navigate to Wise2Sync -> Export -> Profiles and click "Add new Profile" button on top of the page. Select status and fill in the profile name and configuration fields.

### General settings

---

Status \*

Enable or disable this export profile

Name \*

Only seen in the profile and task listing grids

Export hash

Used in WiseXML to fetch exported products. This value is created after creating the profile. Note: it will only become active after the profile has been run at least once

Task priority

Lower number - higher priority. If two or more profiles are to be scheduled at the same time, only the profile with the highest priority will be scheduled

## Product Filter settings

---

Website *	<input type="text" value="Select..."/>
Only products that belong to these websites will be included	
Product status *	<input type="text" value="Select..."/>
Only products with the selected status will be included	
Product visibility *	<input type="text" value="Select..."/>
Only products with the selected visibility will be included	
Product type *	<input type="text" value="Select..."/>
Only products of the selected type will be included	
Minimum price	<input type="text"/>
Maximum price	<input type="text"/>
Minimum stock quantity	<input type="text"/>
Maximum stock quantity	<input type="text"/>

## Export settings

---

Attributes *	<input type="text" value="Select..."/>
Only the selected attributes will be included	
Attribute store values	<input type="text" value="Select..."/>
Which store attribute values to export	
Default store	<input type="text" value="Select..."/>
If more than one option is selected in the "Attribute store values" field, which store should be the default store?	
Attributes	<input type="text" value="Select..."/>
If more than one option is selected in the "Attribute store values", which attribute values should be exported from all of the selected stores?	

## Cron settings

---

Cron *	<input type="text" value="0 */5 * * *"/>
CRON format - [Minute] [Hour] [Day of the Month] [Month of the Year] [Day of the Week]. "10 */2 * * *" runs on the 10th minute every 2 hours. Default: 0 */5 * * *	

## Advanced settings

---

Test product amount	<input type="text"/>
If not empty, only this amount of products will be exported	
Test product sku	<input type="text"/>
For testing purposes. Only the product with this SKU will be exported (ignores all set filters)	

- Enable profile - enable/disable
- Export hash - After you save Export profile and run it hash will be generated. You will need to copy it and send us by email so we can download your products to your Wise2Sync account.
- Product Filter Settings - here you can choose what products you want to be exported to your

Wise2Sync account.

- Export Settings - here you can select what information about the products should be exported.
- Cron - insert CRON expression describing when the export is run.

Advanced Settings - use these settings to test out export with a low amount of products. If you leave the amount empty all the products according to the filtering above will be exported.

## Export configuration

Navigate to Wise2Sync -> Export -> Configuration and click it.

You will find additional settings there:

### General Configuration

<b>Enable Module</b> <small>[global]</small>	<input type="text" value="No"/>	▼
Enable or disable the module. Default: 0		
<b>Enable task cleanup</b> <small>[global]</small>	<input type="text" value="No"/>	▼
Enable or disable export task cleanup. If enabled, tasks that were completed at least 10 hours ago will be deleted. Default: No		
<b>Fix media gallery image URLs</b> <small>[global]</small>	<input type="text" value="No"/>	▼
Set this to 'Yes' if the media gallery images are generated with '/pub/' and do not work. Default: No		

## Export Tasks

Located in Wise2Sync → Tasks.

Tasks are key elements in the Wise2Sync plugin. Import and export processes are encapsulated in tasks. Tasks allow monitoring processes. You can see your profile name, status, how many products were exported, and when the task started and ended.
