

How to use multiple filters in the export profile?

You can use multiple filters in the export profile to narrow the range of products you want to import to your shop.

Here you can see several filtering options as examples:

1. Products from only certain manufacturers will be imported to your shop. Also, only products from mapped categories that cost 55 or more will be imported.

The screenshot shows a software interface with a top navigation bar containing 'Preferences', 'Filter', 'Repricer', 'Template', 'Upload to FTP', and 'Export Results'. The 'Filter' tab is active. Below the navigation bar, there is a filter configuration panel. At the top of this panel, there are two buttons: 'AND' (selected) and 'OR'. To the right of these buttons are two more buttons: '+ Add rule' and '+ Add group'. The filter panel contains three rows of filter rules, each with a red 'X' button to its right. The first row has 'Manufacturer' as the field, 'in' as the operator, and a list of manufacturers: '3M', 'Acer', and 'Aerocool'. The second row has 'Category' as the field, 'is not empty' as the operator, and no value. The third row has 'Price' as the field, 'greater or equal' as the operator, and '55' as the value.

Field	Operator	Value	Action
Manufacturer	in	3M, Acer, Aerocool	X
Category	is not empty		X
Price	greater or equal	55	X

2. Products from only selected categories with a quantity greater than 0 and a price greater than 50 will be imported to your shop.
